

Consumer Council for Water

PR19 – Draft Determination Research

Phase 2 – Summary Reports

Executive Summary – Hafren Dyfrdwy

200 Hafren Dyfrdwy customers were interviewed face to face via Computer Assisted Personal Interview (CAPI). Fieldwork dates ran from 6th August – 16th September 2019. Data was weighted in order to reflect the population of the Hafren Dyfrdwy customer base. All bill amounts shown to customers included forecast inflation. Customers were initially asked about the proposed change in the bill (uninformed responses), before being given information about the proposed service changes to consider alongside the bill change (informed responses).

In terms of the total bill change:

- Acceptability falls by 1% from 79% for uninformed responses to 78% for informed (although this is not significant);
- Acceptability generally fluctuates across age at both the informed and uninformed levels.
 - However, at the informed level, 16-29s are most likely to find the proposed bill acceptable with a 6pt increase and 75+ customers are least likely.
- Over half (66%) find the bill range for performance incentives acceptable.

Summary of methodology

A quantitative approach was adopted, with the majority of interviews conducted via an online survey. Interviews were conducted face to face using Computer Assisted Personal Interviews (CAPI). CAPI interviews were conducted to ensure that the 'offline' population were represented in the sample mix. Data were weighted to match the customer profile of Hafren Dyfrdwy.

A full breakdown of sample groups is shown at the end of this report (page 9) and the questionnaire and showcards on the following pages.

Priority Services Register	
On Priority Services Register	Base size too low
Not on Priority Services Register	79% (0)

Summary of findings:

- 1: Likelihood to find the proposed bill acceptable at the uninformed level is highest for 60-74 year olds and lowest for 45-59 year olds. The greatest increase at the informed level is for 16-29 year olds with an increase of 6pt.
- 2: All customers that provide an income do not change their acceptability once informed. Customers with an income of £50,000 - £74,999 are the most likely to accept proposed bill changes. The base size is too low to report customers with an income of over £75,000
- 3: Unmetered customers are more likely than metered customers to accept the proposed bill changes at both uninformed and informed levels. However, the difference between metered and unmetered customers lessens once they have been informed.
- 4: Acceptability of customers not on priority services register remained the same at uninformed or informed levels. The base size is too low to report the customers on the register.

	Proportion for Hafren Dyfrdwy	Range for WaSCs	Average percentage for all WaSCs	Average percentage for England	Average percentage for Wales
Core indicators

*Customer services and other targeted services are also part of the plan

Top reasons for finding proposed bills acceptable / unacceptable:

Top reasons for finding aspects of proposed bill change acceptable		Top reasons for finding aspects of proposed bill change unacceptable	
Informed acceptability: water services		Informed acceptability: water services	
There is little or no change to my bill	50%	Because of the price increases	39%
Compared to energy prices it's cheaper	26%	Company profits too high	33%
Their plans seem to focus on the right services	25%	Companies should pay for service improvements out of their profits	30%
Informed acceptability: sewerage services		Informed acceptability: sewerage services	
There is little or no change to my bill	48%	Because of the price increases	51%
Their plans seem to focus on the right things	29%	Company profits too high already	36%
Compared to energy prices it's cheaper	26%	I won't be able to afford this	22%
Informed acceptability: combined plan		Informed acceptability: combined plan	
There is little or no change to my bill	53%	Already too expensive/it will still be too expensive	46%
Compared to energy prices it's cheaper	36%	Company profits too high already	44%
I support what they are trying to do in the long term	25%	I expect better improvements for these prices	26%
Bill range for performance incentives			
It's good that the bill can reflect the level of service provided		79% (of those rating it acceptable)	
It's good because this should help get even better service improvements because companies will try harder		75% (of those rating it acceptable)	
The bill should be fixed and not be open to change as services change		62% (of those rating it unacceptable)	
I disagree that bills should be linked with service performance		30% (of those rating it unacceptable)	

At the uninformed stage, customers who provide an 'unacceptable' / 'completely unacceptable' rating at any of the three uninformed stages are asked an open question about why they provided that rating. The most common response is that the bill increase is too high (42% of those asked).

Fig1: Total change acceptability and bill range for incentives by Socio Economic Classification:

!caution: low base size

Acceptability of bill range for incentives tends to be lower than uninformed and informed acceptability of proposed bill changes, especially for customers who work in routine & manual occupations. Customers who are long term unemployed / never worked / full time students are less likely to accept bill changes, however the base size is too low for this to be representative.

Fig2: Uninformed acceptability, 2019-20 and yearly change, and informed acceptability for water and sewerage charges:

!caution: low base size

Uninformed acceptability for the change from 2019 to 2020 is highest among the Higher managerial, administrative & professional occupations. When looking at water services (at the informed level), those in routine & manual occupations are less likely than those in intermediate occupations to accept bill changes (however this is not statistically different). Those who are long term unemployed / never worked / full time students are less likely to accept bill changes, however the base size is too low for this to be representative.

Fig3: Affordability and Priority Services Register by Socio Economic Classification:

!caution: low base size

Affordability of the proposed bill stays fairly similar when looking at both the current and proposed bill. Those in intermediate occupations and the long term unemployed / never worked / full time students are less likely to find the bill affordable (However, the long term unemployed / never worked / full time student has a low base size so this needs to be approached with caution).

- Instructions in **CAPS** are for computer programming
- Instructions in *italics* are for telephone interviewers
- **Bold** or underlined words are for emphasis within a question
- Different question types have different numbers:
 - Screener questions are labelled S01, S02, S03 etc.
 - Main survey questions are labelled Q01, Q02, Q03 etc.
 - Further demographic / classification questions are labelled C01, C02, C03 etc.
 - Number codes are included on each question for data processing purposes

Introduction

All Respondents:

This research is being carried out by DJS Research Ltd on behalf of the [Consumer Council for Water](#) which is the consumer organisation working on behalf of customers of the water companies in England and Wales. The aim of the research is to find out what people think about plans for their [water and sewerage / water] company's services for 2020-2025 and how much they will cost.

You will need to know which water company or companies provide your water and sewerage services in order to complete this survey. This can be found on your current water and sewerage bill(s) and so it would be ideal if you could have your water and sewerage bill to hand.

Before you begin, we want to tell you that every five years, water and sewerage companies write a business plan setting out how they will meet drinking water, sewerage and environmental quality standards and deliver high quality customer service.

Ofwat (the regulator for the water industry), reviews each plan and sets investment and service levels, and the prices that companies can charge their customers for these services. This is your opportunity to have your say on proposals for your company's service levels and bills before Ofwat finalises them.

Please be assured that any answer you give will be treated in confidence in accordance with the Code of Conduct of the Market Research Society and none of your comments will be attributed to you personally. Any personal information we ask for is purely to classify your answers and will not be passed back to the Consumer Council for Water or any third parties for any marketing or sales purposes.

This survey should take no more than 15 minutes to complete.

Should you have any questions about the research please contact:
Matt Prince at mprince@djsresearch.com

Code	Answer list	Scripting notes	Routing
1	Yes		
2	No - return to previous question to re-enter the amount		

Q019.**All respondents not code 85 (don't know) at Q16**

Is this from a bill or is this your best estimate?

SINGLE RESPONSE

Code	Answer list	Scripting notes	Routing
1	From a bill		
2	Best estimate		

UNINFORMED ACCEPTABILITY
INFO2.
Base: WaSC customers only (Q02/1-12 - only include Q2/4 if also coding Q2a/2)

The next set of questions are about proposed changes to your water and sewerage bill from the years 2020 to 2025. You will be shown a number of different figures relating to bill changes. Each of these changes include forecast inflation of 2% a year in line with current Treasury estimates. Please read the information about inflation below before continuing.

Inflation is the rate of increase in prices for goods and services over time and it is included in all utility bills. So, if inflation is 2% in 12 months time, 4 pints of milk which are £1 now will now cost £1.02. Bear in mind that your household income (e.g. wages, benefits, state pensions, etc.) also changes each year. If it keeps up with inflation then, all other things being equal, it will match the increase in the cost of goods and services. If your household income goes up by more than inflation each year, it will generally feel like it is going further. If it doesn't keep up with inflation, it may not feel as though it going as far as it used to.

[CAPI ONLY] Please note, if you would like to refer back to this information at any point, please ask your interviewer.

We would like you to imagine that it is now the year 2020 and you have just received your bill for water and sewerage services. Please answer the following question in terms of how you would feel based on the following...

Last year (2019) your bill was £[pull through with calculation based on current bill and 2020 formula]. It's now 2020, and your bill for the year is £[pull through with calculation based on current bill and 2020 formula].

DP NOTE: AS PER QUESTION INSTRUCTION ONLY SHOW TO WaSCs: ANGLIAN WATER, HAFREN DYFRDWY (POWYS), SEVERN TRENT, SOUTH WEST WATER, SOUTHERN WATER, THAMES WATER, UNITED UTILITIES, WESSEX WATER, YORKSHIRE WATER, WELSH WATER, NORTHUMBRIAN WATER

INFO3.

Base: WoC customers only (Q02/13-24 and Q03/1)

As you get your water and sewerage services from two different companies, we are going to ask you about the bill for each service separately. When answering these questions, please think about the charge for each service separately – we will ask you about the overall bill for both services later on.

The next set of questions are about proposed changes to your **water** bill from the years 2020 to 2025. You will be shown a number of different figures relating to bill changes. Each of these changes include forecast inflation of 2% a year in line with current Treasury estimates. Please read the information about inflation below before continuing.

Inflation is the rate of increase in prices for goods and services over time and it is included in all utility bills. So, if inflation is 2% in 12 months time, 4 pints of milk which are £1 now will now cost £1.02. Bear in mind that your household income (e.g. wages, benefits, state pensions, etc.) also changes each year. If it keeps up with inflation then, all other things being equal, it will match the increase in the cost of goods and services. If your household income goes up by more than inflation each year, it will generally feel

	2020	2021	2022	2023	2024	2025	TOTAL CHANGE
Text to be pulled through based on their water bill amount	£.p	£.p	£.p	£.p	£.p	£.p	2025 £.p – 2020 £.P

Now, thinking about **how the water bill changes each year** , from 2020 to 2025, how acceptable or unacceptable is this to you? *Please choose one answer only*

INFO6.

Base: All respondents

Now we are going to show you how your water and sewerage services could change from 2020 to 2025. We would like to know how acceptable or unacceptable the proposed service changes are to you.

So, the next questions are about the **services** provided by <WaSCs: ANSWER GIVEN AT Q2> / <WoCs: ANSWER GIVEN AT Q2 which provides your water supply and ANSWER GIVEN AT Q4 which provides your sewerage services>.

When answering questions, please bear in mind that because you are charged for two services i.e. for water and for sewerage, you will be asked to consider these individually as there are different service levels and prices for each.

The information on the following pages shows the different water services provided by [ANSWER GIVEN AT Q2], and what they plan to improve or maintain between 2020 and 2025. Please note that the investment details shown are a snapshot of the proposals; if there is no detail shown it doesn't mean that the company isn't investing in that area.

The table also shows the total price change starting with the 2020 bill through to 2025, including inflation. When considering the price please bear in mind that your household income and inflation will also change over the next 5 years.

ODI Section

Q047.

Base: All WaSC respondents (Q01/12)

We have just shown you the baseline service plan and charges proposed for your water and sewerage services from 2020 to 2025.

Sometimes, the level of service customers get is different to this baseline plan. It could be lower than in the plan, for example, because extreme weather affected water supplies or caused flooding, or the service level could end up being better because new technology means the company has become more efficient. By 2022, it will be clear whether your company is providing a service which is better or worse than planned, and your bill could change to reflect this.

SHOWCARD D

If [**insert water company from Q02/1-12**] **did not meet any of these service levels**, and gave you notably lower service levels than in their plan, your annual water and sewerage bill from 2022 onwards, including inflation, would go down by up to £xxx.

On the other hand, if [**insert water company from Q02/1-12**] **exceeds all of these service levels** to give you notably better service levels than in their plan, your annual water and sewerage bill from 2022, including inflation, would go up, by up to £xxx.

In practice, it's unlikely that your company would either miss all of its service level targets, or exceed them all. Experience is that companies miss some, beat others, or are so close to the planned service level that it makes no change to the bill. So it's more likely that your bill would end up being **closer to the middle rather than at the bottom of the range ([pull through from bottom]) or at the top ([pull through from top])**.

Thinking about this, could you please state how acceptable or unacceptable the potential bill for lower and higher service levels is to you? Please remember that your household income will also change over the five years from 2020 to 2025 – it may change in line with inflation, by less than inflation, or increase by more than inflation.

85	Don't know		

Q050.

Base: All WoC respondents (Q02/13-24 OR Q03/1)

We have already shown you the baseline service plan and charges proposed for your water services starting from the next bill in 2020 through to 2025.

Sometimes, the level of service customers get ends up being different to what has been planned. Performance against targets could end up being worse, for example, because extreme weather affected water supplies or caused flooding, or could end up being better because new technology means the company has become more efficient. By 2022, it will be clear whether your company is providing a service which is better or worse than planned, and your bill could change to reflect this.

SHOWCARD D

If [**insert water company from Q02/13-22 or 24 OR Q02a/1**] **did not meet any of these service levels**, and gave you notably lower service levels than in their plan, your annual water bill from 2022 onwards, including inflation, would go down by up to £xxx.

On the other hand, if [**insert water company from Q02/13-22 or 24 OR Q02a/1**] **exceeds all of these service levels** to give you notably better service levels than in their plan, your annual water bill from 2022, including inflation, would go up by up to £xxx.

In practice, it's unlikely that your company would either miss all of its service level targets, or exceed them all. Experience is that companies miss some, beat others, or are so close to the planned service level that it makes no change to the bill. So it's more likely that your bill would end up being towards the middle of this range than at the bottom or top.

Thinking about this, could you please state how acceptable or unacceptable this potential range that your bill could fall into is to you as a customer? Please remember that your household income will also change over the five years from 2020 to 2025. If it keeps up with inflation it should match the increase in cost of goods and services over time.

TEXT FOR SOUTH STAFFORDSHIRE WATER CUSTOMERS ONLY (Q02/23)

If South Staffordshire Water did not meet any of these service levels, and gave you notably lower service levels than in their plan, your water bill, including inflation, could go down. On the other hand, if they exceeded all of these service levels and gave you notably better service levels than in their plan, your water bill could go up to reflect this higher level of service. Your bill could increase by up to £2.50 a year, and go down by up to £3 a year

However, South Staffordshire Water propose to keep their water bills the same from 2020 to 2025 and apply any difference in the bills they could have charged from 2026 onwards – which will depend on how good their service performance was from 2020-2025. So from 2020-2025, the average household water bill will be unchanged, regardless of performance and the effect of inflation, at £xxx
Thinking about this, could you please state how acceptable or unacceptable this is to you?

Q052.

Base: All WoC respondents (Q02/13-24 OR Q03/1)

We have already shown you the baseline service plan and charges proposed for your sewerage starting from your bill in 2020 through to 2025.

Sometimes, the level of service customers get ends up being different to what has been planned. Performance against targets could end up being worse, for example, because extreme weather affected water supplies or caused flooding, or could end up being better because new technology means the company has become more efficient. By 2022, it will be clear whether your company is providing a service which is better or worse than planned, and your bill could change to reflect this.

SHOWCARD D - VISUAL EXAMPLE HERE

If [insert sewerage company from Q03] **did not meet any of these service levels**, and gave you notably lower service levels than in their plan, your annual sewerage bill from 2022 onwards, including inflation, would go down by up to £xxx.

On the other hand, if [insert sewerage company from Q03] **exceeds all of these service levels** to give you notably better service levels than in their plan, your annual sewerage bill from 2022, including inflation, would go up by up to £xxx.

In practice, it's unlikely that your company would either miss all of its service level targets, or exceed them all. Experience is that companies miss some, beat others, or are so close to the planned service level that it makes no change to the bill. So, it's more likely that your bill would end up being towards the middle of this range than at the bottom or top.

Thinking about this, could you please state how acceptable or unacceptable this potential range that your bill could fall into is to you as a customer? Please remember that your household income will also change over the five years from 2020 to 2025. If it keeps up with inflation it should match the increase in cost of goods and services over time.

Why do you say that? Please choose as many of the options below that fit your view

MULTI RESPONSE

Code	Answer list	Scripting notes	Routing
1	The bill should be fixed and not be open to change as services change	Only show if coding 3-4 @ Q48	
2	I disagree with linking bills to company service performance	Only show if coding 3-4 @ Q48	
3	The company should be penalised in other ways if they under achieve on services	Only show if coding 3-4 @ Q48	
4	The company should be rewarded in other ways if they over achieve on services	Only show if coding 3-4 @ Q48	
5	It's good that the bill can reflect the level of service provided	Only show if coding 1-2 @ Q48	
6	It's good because this should help get even better service improvements as companies will try harder	Only show if coding 1-2 @ Q48	
7	Uncertainty about how the bill could change each year makes budgeting for it difficult and I don't know if I'll able to afford it	Only show if coding 3-4 @ Q48	
8	I'd worry that saving up all these bill changes until 2026 might have a big effect on the bill	Only show if code 23 @ Q03 (South Staffs Water)	
9	I'd prefer the bill to be flat for a few years, and for it to change from 2026 onwards than for it to change each year	Only show if code 23 @ Q03 (South Staffs Water)

Are you on your water company's Priority Services Register? Priority services registers hold information about customers' needs for services like large print bills, or passwords, and also so that if there is a problem with their water supply, their supplier will know if they need bottled water, for example for a medical condition or if they can't get to a bottled water station.

THANK YOU FOR YOUR HELP IN THIS RESEARCH

This research was conducted under the terms of the Market Research Society (MRS) code of conduct and is completely confidential. If you would like to confirm the Researchers credentials please call the MRS free on 0500 396999.

We would be grateful if you could provide your name and telephone number for quality control purposes. Please note that these will only be used by our quality control team and will not be passed onto any third parties.

Showcards

Shown at Q033:

Hafren Dyfrdwy supplies 97,000 households with water services and 24,500 with sewerage services, through 2,650km of water pipes and 510km of sewers and drains.

Hafren Dyfrdwy's plan aims to improve the quality and reliability of water supplies by reducing water lost to leaks, helping people to use less water and replacing more lead supply pipes. It will reduce flooding from sewers and improve the water environment. It also offers more help for people in financial hardship and aims to get more people aware of and signed up for services such as large print bills, passwords and specific help if their water supply is ever disrupted.

- Hafren Dyfrdwy is investing £160 million in services from 2020 to 2025
- The average bill will increase by 4% over five years including forecast inflation of 2% each year
- The main service changes are shown to the right

A snapshot of the services which the company provides is shown here. Please note in some cases figures have been rounded up or down.

Water services

Please think about each of these as a service which is provided to your home, or is available to you as an individual, or which affects the environment in your area all day and every day.
How acceptable or unacceptable are the levels of service you see here?

WATER SERVICES	Service level in 2020	Service level in 2025
Reduce the average time a property is without tap water when something unexpected happens like a burst water main or leak	Average of 11 minutes and 40 seconds	Reduce to average 3 minutes per property by 2025
Reduce the amount of water lost due to leaks from water mains and pipes	15 megalitres per day in 2020	Leakage down 15% to 13 megalitres a day
Help people to use less water	Each person uses an average of 141 litres per day	Reduce to an average of 135 litres a day, 6 litres a day less
Reduce the number of burst water mains a year	126 per 1,000km of water main (253 in total)	110 per 1,000km of water main (222 in total)
Reduce the number of customer contacts about the taste, smell or colour of tap water	22 contacts per 10,000 population (490 in total) a year	14 contacts per 10,000 population (317 in total) a year
Replace more lead water supply pipes	0 pipes replaced from 2015 to 2020	230 pipes replaced from 2020 to 2025
Improving wildlife habitats on land owned by the company e.g. peat bogs in Berwyn Hills	0 hectares improved	450 hectares of upland peat bog in the Berwyn Hills improved from 2020 to 2025

Shown at Q036:

Sewerage services in Powys are provided by Hafren Dyfrdwy with 510km of sewers and drains.

Hafren Dyfrdwy's plan aims to improve pollution, reduce internal sewer flooding and improve the environment.

- The main service changes are shown to the right

A snapshot of the services which the company provides is shown here. Please note in some cases figures have been rounded up or down.

Sewerage services

Please think about each of these as a service which is provided to your home, or is available to you as an individual, or which affects the environment in your area all day and every day.
How acceptable or unacceptable are the levels of service you see here?

SEWERAGE SERVICES	Service level in 2020	Service level in 2025
Reduce the number of homes flooded with sewage each year	2 homes in 10,000 affected (5 in total)	1 home in 10,000 affected (4 in total)
Reduce the number of collapsed sewers per 1,000km of sewer	8 per 1,000km of sewers (4 in total)	5 per 1,000km of sewers (3 in total)
Reduce pollution of rivers, streams etc. so they are clean and safe for wildlife and people	158 pollution incidents per 10,000km sewers (8 in total)	97 pollution incidents per 10,000km sewers (5 in total)
Reduce the number of blocked sewers	283 blockages a year	244 blockages a year

Shown at Q039:

Hafren Dyfrdwy supplies 97,000 households with water services and 24,500 with sewerage services, through 2,650km of water pipes and 510km of sewers and drains.

Hafren Dyfrdwy's plan aims to improve the quality and reliability of water supplies by reducing water lost to leaks, helping people to use less water and replacing more lead supply pipes. Other services

Please think about each of these as a service which is provided to your home, or is available to you as an individual, or which affects the environment in your area all day and every day.

How acceptable or unacceptable are the levels of service you see here?

CUSTOMER SERVICE	Service level in 2020	Service level in 2025
Satisfaction with customer services	In the top 5 out of 21 water companies for customer services, as measured by Ofwat	In the top 5 out of 21 water companies for customer services, as measured by Ofwat
SOCIAL & OTHER SERVICES	Service level in 2020	Service level in 2025
Increase the number of households signed up for Priority Services such as large print bills, passwords, extra help if water supply is off etc.	1% of households are signed up	7% of households are signed up
Keep Priority Service records up to date so that people are getting the services they need (90% checked every 2 years)	50% of records are checked	90% of records are checked
Help more customers who struggle to afford their water bill	66% of struggling customers are helped	73% of struggling customers are helped
Ensure that all customers on the company's Priority Services Register are given help if the water supply to their property is ever disrupted	100% of registered customers	100% of registered customers

Shown at Q048:

Performance incentives

As the regulator, Ofwat monitors the performance of water companies against their targets.

To encourage them to reach their targets, Ofwat instructs companies to develop performance incentives. These are based on;

1

Missed service level targets → lower bills than the baseline plan

Bills fall where targets are missed and a much lower service is given

2

Exceeded service level targets → higher bills than the baseline plan

Bills increase where targets are beaten and a much higher service is given
